Subject: Re: IPM fact sheet/training by PEHSU FW: St John's VI pesticide poisoning

Hi Judith,

As you can see, your query re: IPM fact sheet/training is already on the PEHSU radar screen – what a great group to work with. I'll get you numbers for Maida and Damiris.

Agreed, this is so helpful. Would be great to have further discussion when possible. It is basically is the equivalent of an environmental morbidity and mortality case review (M and M)...we could bring others to the table eg poison control etc.

Best,

Maida

With Leah being down in St John's we should have a wealth of information on the genesis, exposure, and aftermath of the event. It would certainly be worth re-constructing in the interest of developing lessons learned and precautionary materials.

Thanks Mark! Are you able to share the decontamination protocol? How were the other units addressed? Did they clear the resort or only rooms recently fumigated? Lots of questions...

Subject: St John's VI pesticide poisoning

Hi Maida,

Interesting ideas. It does make one wonder what transpires in a unit between rentals. Other than being involved in the recent decon protocols for the two units, I've not had a lot of involvement. I copied Joe Rotola, who runs our Removal Action Program and John Gorman who runs the Pesticide Program for any feedback.

Glad to see you have the home visiting services on the radar screen - and one more item: did you have any success in contacting anyone at St Luke's Newburgh re: the Grand Rounds proposal? I have not yet made any contacts. Thanks!

Partnering with Parents to Help Children Succeed

Thanks Mark, this is timely. We are exploring home visiting services as a PEHSU program. Will update you on these plans hopefully soon.

Any updates on the USVI resort where the family stayed? Our team wondered what some upstream activities might be to aid in preventing future cases...

One thought we had was could you develop a set of questions consumers can ask before renting a home etc. A PEHSU elective trainee is looking into this. It's tricky bc as this case illustrates, questions in advance may not have identified the risk. We have a number of vacation related cases now on a range of exposures from CO to solvents to pesticides. Could be worth pursuing.

Perry further posed whether this could be directed to the resort....e.g., develop a set of questions that the resort would be responsible for addressing and having available (shift burden from consumer to owner). We thought the resort involved could serve as a champion for this eg turn a negative into a positive.

Any thoughts appreciated.

Best,

Maida

Hi Prentiss,

Thanks for sharing this information. As part of Region 2's Making a Visible Difference in Communities initiative, we have been working with our PEHSU to develop provider-to-provider training on pediatric environmental health topics for the community (Newburgh, NY) pediatricians and pediatric nurses. At the same time, we are also working with a local asthma coalition to implement and facilitate the funding mechanism for in-home asthma and lead preventions services that are Medicaid reimbursable through the Affordable Care Act. The HRSA-funded Home Visiting Program could serve as a bridge for our two related initiatives - i.e., get the PEHSU engaged in training Home Visiting staff and work with our Federal partners at HHS (HSRA) to provide funding for in-home environmental health intervention/prevention services. HRSA has representation on our Regional EJ Interagency Working Group, so we will be reaching out to them to see how they can assist. Look forward to sharing experiences on this issue – yes, it is ripe for the picking ☺

Regards

Our new regional PEHSU will be visiting the region in June and we will be inviting our federal partners to join us and we will begin brainstorming on potential collaborations and the home visiting program is one of the areas of natural fit. If there are other regions doing anything with their regional HRSA on this issue or if OCHP is going to re-engage HRSA it would be great to know before our meeting so I could share.

Thanks!

Yes, HRSA has a number of programs that CH would be such a great compliment to improve the lives of children! The Home Visiting Program is one of them! In addition to Kathy S, Martha was also working with HRSA.

It seems that each Regional HRSA is set up very different. I know Margo Young was able to have a lot more flexibility in the work she did with her regional HRSA. Here in region 3 a lot of decisions weren't made at the regional level but needed clearance thru their HQ Office. They have the audience and a systematic way would greatly help to get our messages out. The reproductive environmental health conference I did with HRSA, ATSDR and HHS was primarily initiated with their Health Centers Programs. We were also looking at doing training with their Home Visiting . Our regional PEHSU have been working with them on providing training to their healthcare providers. The timing seems ripe to revisit conducting training for the home visiting program.

This is the HRSA program that Kathy Seikel was trying to get OCHP connected with before she retired, but I don't think it ever happened, or at least not in a substantive way. There would be great benefit to considering the physical environment in the home (e.g. lead, pests, mold, ETS) when a service provider is visiting the family in an effort to optimize a child's health and developmental outcomes, but HRSA doesn't require it, although they may consider it allowable. "Home visitors" are an audience we have tried, and will continue, to familiarize with children's environmental health and principles of healthy homes, but unless there's a more systematic effort, the child's home environment will continue to be a source of contaminants that will have a detrimental impact on his/her long-term success.

The Maternal, Infant, and Early Childhood Home Visiting Program: Partnering with Parents to Help Children Succeed

This document describes the Maternal, Infant, and Early Childhood Home Visiting Program (Home Visiting Program) to support voluntary, evidence-based home visiting services for at-risk pregnant women and parents with young children up to kindergarten entry. Topics include efforts to expand services to more families and communities, program participants, notable achievements, the Tribal Home Visiting Program, and research and evaluation. State fact sheets are also available.

Produced by Health Resources and Services Administration's Maternal and Child Health Bureau. Available at <http://mchb.hrsa.gov/programs/homevisiting/programbrief.pdf> (brief) and <http://mchb.hrsa.gov/programs/homevisiting/states/index.html> (state fact sheets).
